

Making Campus Sustain-able

STUDENT HANDOUT

In class, decide on the route you will walk, including findings from your home research. Walk your campus route for 25 min. Mark your route and the material manifestations of your infrastructure you see on your map.

Note down your observations about them:

- How (in)visible are they?
- What state are they in?
- How are people interacting with them (you can also ask people questions)?
- How sustain-able do they seem to you?
- How do the infrastructures connect with their surrounding natural habitat?
- What signs of human-environment interactions did you see connected to your infrastructures?

Take pictures where appropriate (not of people). Pay particular attention to any sustainability efforts you might have learned about or see.

Be back in class to prepare your presentations by 11:40 am (insert time)!
